

MOHAMMED SAAD

Computer Science Engineering Student | Machine Learning & Full-Stack Development

+91 9963058044 | 555mohammedsaad@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Computer Science undergraduate (CGPA 8.99/10.0) with practical experience in machine learning, cloud computing, and full-stack development. Built two end-to-end projects covering federated-learning security and employee-engagement platforms. Completed two recognized internships in artificial intelligence, cloud systems, and agentic workflows. Skilled in Python, React.js, and FastAPI.

EDUCATION

Marri Laxman Reddy Institute of Technology & Management

CGPA: 8.99/10.0

Bachelor of Technology, Computer Science & Engineering

2023 – 2027

Narayana Junior College — Mathematics, Physics, Chemistry

Grade: 95% | 2021 – 2023

Gowtham Model School — SSC (10th)

Grade: 100% | 2021

EXPERIENCE

AI/ML Virtual Internship — EduSkills (AICTE & AWS Academy)

Remote | Apr – Jun 2025

- Completed a 10-week, government-recognized internship covering core machine learning concepts, including data preprocessing, model development, and evaluation.
- Applied Python and AWS Academy cloud resources across 3 guided exercises to build cloud-integrated machine learning workflows.

AI & Cloud Technology Internship — Edunet Foundation

Remote | Jul – Aug 2025

- Undertook a structured 4-week internship covering artificial intelligence, cloud computing, data analytics, RAG, and agentic systems.
- Explored practical labs using IBM watsonx AutoAI, Granite Models, and Watsonx Assistant, building proficiency across 3 enterprise tools.
- Built LearnMate, an agentic career-guidance system that combines machine learning workflows, cloud-native architecture, and prompt engineering to deliver personalized recommendations.

PROJECTS

LoMar — Local Defense Against Poisoning Attacks in Federated Learning

- Designed and implemented a client-level defense system to detect and filter malicious model updates in federated learning, reducing the impact of poisoned updates on global model accuracy.
- Developed the detection pipeline in Python using Django and Flask alongside TensorFlow and PyTorch, enabling automated, real-time analysis of incoming client updates.
- Ran statistical anomaly detection and validation tests, improving model robustness and maintaining classification accuracy under simulated poisoning attacks.

BragBoard — Internal Employee Recognition Platform

- Engineered a full-stack employee recognition platform using React and FastAPI, enabling teams to log and track peer recognition in real time.
- Integrated PDF report generation with jsPDF, allowing users to export platform insights and engagement data in one click.

TECHNICAL SKILLS

Programming Languages: C, Java, Python, R

Frontend Development: React.js, HTML, CSS

Backend Development: Node.js, FastAPI

Database Systems: MySQL, MongoDB (basics)

Developer Tools: Visual Studio Code, Git, GitHub, Jupyter Notebook

ACHIEVEMENTS & CERTIFICATIONS

- Oracle Professional Generative AI Certification — covering prompt engineering, LLM fundamentals, and applied generative AI application design.
- HackerRank Silver Badge in Java, awarded for algorithmic problem-solving proficiency.
- Selected for "Build Your Own Generative AI Model," a workshop run by NxtWave focused on generative model development.
